UX/UI & Product Design | UX Research | Design System | Digital Product Management

UX Designer with 6+ years of experience in B2B digital products across fintech, financial markets, insurance, and regulated platforms. I turn business rules, data, and complex operational workflows into clear, scalable, implementation-ready experiences by combining research, information architecture, prototyping, design systems, and close collaboration with product and engineering. My background includes Payfy, Economatica, MAG Seguros, and T2M, as well as the Insurtech Innovation Program at PUC-Rio in partnership with IRB Brasil.

I work with Figma, Hotjar, Microsoft Clarity, Google Analytics, Notion, and generative AI tools, supported by knowledge of agile methods, HTML, CSS, and JavaScript for effective technical collaboration with cross-functional teams. I hold an MSc in Design from ESDI/UERJ, focused on AI applied to Design, and a BA in Graphic Design with an emphasis on Digital Media from PUC-Rio. I am currently pursuing a postgraduate specialization in Human-Computer Interaction and User Experience (UX) at PUC-Rio. An academic exchange at the University of Coimbra complements a profile that blends technical rigor, business perspective, and international experience.

Professional Journey | 2020 – 2026

I began in 2020 as an intern at ECOA PUC-Rio and moved into a UX Design internship at MAG Seguros in 2021. In 2023, I worked as a UX Designer at T2M before returning to MAG as a Mid-level UX Designer. In 2025, I became a Senior UX Designer at Economatica and, in 2026, joined Payfy as a UX Designer—bringing together more than six years of B2B digital product experience.

Education

- **MSc in Design | ESDI – UERJ (Rio de Janeiro State University)**

Completed: 2025

- **Postgraduate Specialization in Human-Computer Interaction and User Experience (UX) | PUC-Rio**

In progress

- **BA in Graphic Design, Digital Media emphasis | PUC-Rio**

Completed: 2018

- **Academic Exchange | University of Coimbra (Portugal)**

Completed: 2018

Results & Recognition

- **40% Increase in Design System Component Reuse | Economatica**

Built a design system by mapping duplicated components, consolidating variants, and documenting reusable patterns, contributing to a 40% increase in component reuse across product and engineering.

- **Design-to-Engineering Handoff Optimization | Economatica**

Reorganized technical documentation for complex financial screens by standardizing states, exceptions, and behavior rules, reducing handoff time by four days per sprint.

- **Improved Efficiency in Financial Decision-Making Workflows | Economatica**

Designed dense interfaces for analysts, managers, and institutional investors, applying qualitative research and UX audits to validate workflows and achieving a 20% efficiency gain in professional users' decision-making.

- **Legacy Module Migration to a Modernized Platform | Economatica**

Led the technical and functional migration of legacy-platform modules, delivering six-plus redesigned modules while maintaining the company visual language and resolving inconsistencies accumulated over decades of product evolution.

- **Generative AI Agent Research | Economatica**

Used Claude agents as research partners to analyze competing financial platforms—including Bloomberg, FactSet, Koyfin, and YCharts—and translate findings into concrete interface and content recommendations.

- **Mobile Engagement Growth in a B2B Platform | MAG Seguros**

Led the design of a mobile-first platform for insurance brokers, consolidating portfolio, payment, performance, and client information into a user-centered experience that generated average mobile-engagement growth of 10% per major release.

- **Strategic Repositioning of a Digital Product | MAG Seguros**

Led broker research during the redesign of the MAG Venda Digital iOS app, identifying trust and legitimacy at the point of sale as the core challenge and turning a visual request into a strategic design opportunity and internal product repositioning.

- **Design System Foundation for a Mobile App | MAG Seguros**

Created a design system from scratch for the broker app, including components, states, visual patterns, and development documentation—establishing a technical foundation for scalability and consistency in the sales tool.

Professional Experience

Product Design & UX in B2B Fintech | *Payfy*

Role: UX Designer

07/2026 – Present

Design interfaces and workflows for a B2B corporate expense-management platform, covering corporate cards, Pix payments, reimbursements, approvals, spending policies, receipts, reconciliation, accounting automation, and ERP integrations.

- Map and evolve complex financial workflows across multiple user roles, permissions, policies, approvals, validations, exceptions, and operational traceability.
- Build and evolve interface patterns in Figma, including components, states, variants, and usage rules that support visual consistency and product scalability.
- Document and hand off workflows to engineering with business rules, permissions, error states, and expected behavior to reduce implementation ambiguity.
- Partner closely with product, engineering, and business stakeholders to turn operational pain points into prioritized interface and experience improvements.

Product Design & UX in Financial Markets | *Economatica*

Role: Senior UX Designer

06/2025 – 05/2026

Designed dense interfaces for a Latin American financial-data platform serving analysts, asset managers, and institutional investors, working on complex decision-making workflows, design systems, technical documentation, and research with professional users.

- Migrated legacy modules to a new platform by mapping workflows, identifying historical technical constraints, and applying improvements based on user and stakeholder feedback—delivering six-plus redesigned modules.
- Built a corporate design system in Figma, organizing components, visual patterns, states, tokens, and handoff documentation; this contributed to a 40% increase in component reuse across product and engineering.
- Produced technical documentation and engineering handoffs for complex financial screens, organizing files by workflow and specifying states, exceptions, and behavior rules—reducing handoff time by four days per sprint.
- Conducted qualitative research with financial-market professionals to investigate data-analysis and decision-making patterns, translating findings into interface improvements aligned with real platform use.
- Conducted UX audits and heuristic reviews of modules, assessing hierarchy, consistency, and affordance and producing severity- and impact-prioritized recommendations to reduce development rework.
- Conducted competitive research on platforms such as Bloomberg, FactSet, Koyfin, and YCharts using generative AI agents (Claude), desk research, and Obsidian-based benchmarking, translating findings into interface and content recommendations.

Product Design & B2B Insurance Platform | *MAG Seguros*

Role: Mid-level UX Designer

10/2023 – 05/2025

Led design for a mobile-first B2B platform for insurance brokers, consolidating portfolio, payment, sales-performance, and client information while applying research, prototyping, and metrics to continuously optimize the product.

- Led the broker-platform design by mapping commercial routines, organizing needs into flows, creating Figma prototypes, and validating with stakeholders—generating average mobile-engagement growth of 10% per major release.
- Conducted qualitative research with brokers, preparing discussion guides, identifying pain patterns, and translating findings into product decisions; this highlighted trust and sensitivity around client data as central to repositioning the screens.
- Structured information architecture for portfolio data through summary, alert, detail, and history views; prioritized action-required information and organized more actionable screens, reducing missed opportunities caused by poor visibility.
- Applied mobile-first design by prioritizing key actions, reducing navigation friction, and optimizing essential information for smaller screens, with ongoing validation through Hotjar and Microsoft Clarity to support mobile-engagement growth.
- Aligned strategically with product, business, sales, and engineering stakeholders by presenting problems, grounding decisions in research evidence, and advocating for a platform centered on broker value.
- Created technical development documentation covering states, behavior rules, and scenarios, integrating the design system, on-screen annotations, and direct developer alignment to reduce rework.

Interface Design & B2B Digital Experience | *T2M*

Role: UX Designer

03/2023 – 10/2023

Worked on B2B projects embedded at MAG Seguros, focusing on user journeys, prototyping, usability testing, and metrics analysis to inform design decisions and improve design-engineering communication.

- Created user journeys and navigation flows for B2B projects, applying UX research methods to identify improvement opportunities and behavioral patterns.
- Created interactive Figma and Adobe XD prototypes, using usability testing to validate concepts and refine workflows before engineering handoff.
- Analyzed behavioral metrics with Hotjar and Google Analytics, grounding design decisions in quantitative data and building evidence-validated hypotheses.
- Implemented interface solutions based on accessibility and responsive-design principles, ensuring a consistent experience across devices.
- Improved technical-documentation processes to facilitate design-engineering communication, standardizing deliverables and reducing friction in the implementation cycle.

Experience Design & Digital Innovation in Insurance | *MAG Seguros*

Role: UX Design Intern

03/2021 – 12/2022

Contributed to redesigning the MAG Venda Digital iOS app used by brokers during sales conversations, creating a design system from scratch, conducting user research, building campaign landing pages, and exploring alternative sales-tool workflows.

- Completed the Adobe XD redesign of the MAG Venda Digital iOS app by assessing visual and functional issues, rebuilding it on iOS patterns, and validating brand coherence to align the tool with real consultative-sales contexts.
- Created a design system from scratch for the app, including components, states, visual patterns, and technical documentation for engineering—establishing a foundation for product consistency and scalability.
- Conducted qualitative research with brokers, listening to real situations, identifying pain patterns, and redefining the project problem; this showed trust and legitimacy at the point of sale to be the central issue.
- Developed a parallel version of the sales tool focused on reducing interface friction and the number of actions required to close a sale, creating an alternative flow later incorporated into the product by the senior team.
- Created partner and campaign landing pages in Unbounce and Figma, applying strategic briefs to build conversion-oriented pages.
- Presented and defended design decisions to stakeholders, linking each decision to research-observed problems and repositioning the project internally as a strategic design opportunity.

Innovation Design & Co-creation in Insurance | *ECOA PUC-Rio*

Role: UX Design Intern

08/2020 – 03/2021

Worked in the Insurtech Innovation Program, a multidisciplinary co-creation initiative led by PUC-Rio with MAG Seguros and IRB Brasil RE, focused on developing innovative solutions for the insurance and reinsurance market.

- Immersed in insurance-market challenges through exploratory research, interviews, and desk research, building expertise in regulated products and identifying institutional, technological, and regulatory constraints.
- Generated solution hypotheses through design thinking, structured brainstorming, and prioritization of viable paths, turning open-ended problems into concrete product or service proposals.
- Prototyped solutions in Figma, creating wireframes and flows to test and communicate ideas, making abstract hypotheses assessable in short innovation cycles.
- Collaborated across disciplines in workshops and group activities, using visual artifacts to support collective discussions around complex problems.
- Presented proposals to stakeholders through narratives structured around context, problem, solution, and rationale, building practice in communicating design value in business contexts.
